

Falcon Finalysis

Financial Analytics & Decision Support

Apex Consumer Industries Ltd.

FY2021 - FY2025 | BDT | Consumer manufacturing

Financial analysis report

Generated 28 September 2026, 18:50 UTC

From Financial Data to Financial Insight

Local, deterministic analysis. This report is a snapshot of the supplied data and assumptions.

Falcon Finalysis is an analytical and educational decision-support tool. Outputs depend on the accuracy and completeness of uploaded financial information. Results are not investment, lending, accounting, audit, tax, or legal advice.

Executive summary

All monetary statement tables use millions of BDT. Ratios are labelled separately.

Financial Overview

FY2025 revenue is 1,670,000,000.00 in reporting currency units. Revenue changed 12.5% versus the prior year.

Profitability

Net Profit Margin is 7.9%. Previous: 8.4%; change: -0.5 percentage points. Changes may reflect pricing, product mix or cost pressure; the data alone does not identify the cause. Three-year assessment: Deteriorating.

Liquidity

Current Ratio is 2.70x. Previous: 2.45x; change: +0.24. Current assets provide 2.70 for each 1.00 of current liabilities. Positive operating cash flow provides additional context but does not guarantee timely payments. Three-year assessment: Improving.

Solvency

Debt-to-Equity is 0.49x. Previous: 0.48x; change: +0.00. Uses interest-bearing short- and long-term debt, excluding other liabilities. Three-year assessment: Stable.

Efficiency

Cash Conversion Cycle is 78.59 days. Previous: 69.59 days; change: +9.01. Longer cycles may increase funding needs; negative cycles can reflect collection before supplier payment. Three-year assessment: Strong Deterioration.

Cash Flow

Operating Cash Flow Margin is 10.8%. Previous: 10.9%; change: -0.1 percentage points. Evaluate alongside related metrics and industry conditions. Three-year assessment: Deteriorating.

Growth

Revenue growth: 12.5%. Conventional growth is unavailable when the prior base is nonpositive.

Financial health & highlights

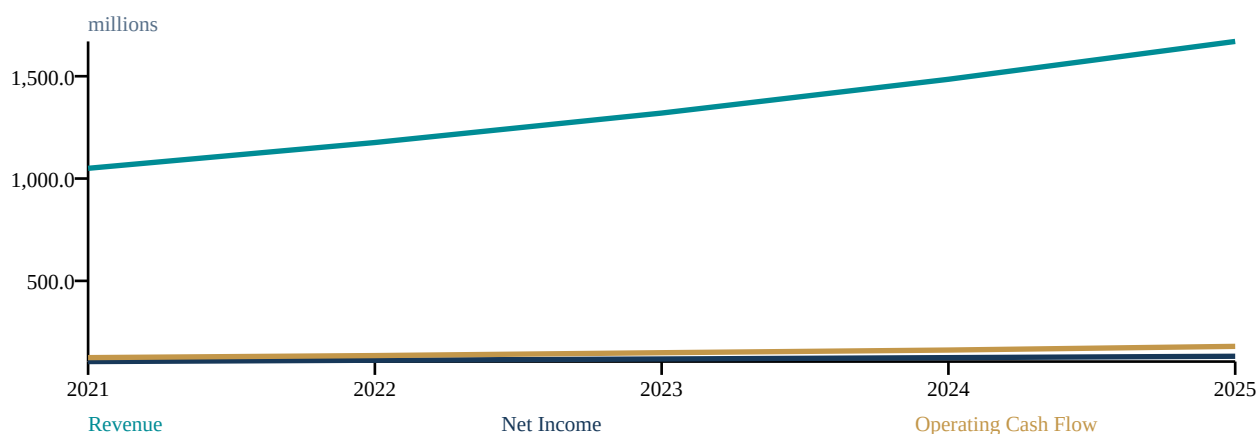

Falcon Finalysis Financial Health Score: 80.0 / 100 - Healthy

Weighted data coverage: 100%. General analytical guideline; appropriate benchmarks vary by industry. This is not an industry-standard credit score.

Metric	Weight	Score / 100	Coverage
Liquidity	20.00	100.00	1.00
Profitability	20.00	73.23	1.00
Leverage/Solvency	20.00	78.69	1.00
Efficiency	15.00	61.93	1.00
Cash Flow	15.00	72.52	1.00
Growth/Stability	10.00	94.88	1.00

Coverage is shown as a decimal fraction in the table. Scores are normalized over available weights; overall scores need at least 75% coverage and evidence in every category.

Operating Cash Flow Margin is 10.8%. Previous: 10.9%; change: -0.1 percentage points. Evaluate alongside related metrics and industry conditions. Three-year assessment: Deteriorating.

Cash generation after investment

Ratio analysis

First-year average-balance ratios use ending balances because opening balances are unavailable. Later years use the mean of consecutive opening and closing balances. Revenue proxies credit sales; COGS proxies purchases. Full fiscal years use 365 days.

Liquidity

Metric	2021	2022	2023	2024	2025
Current Ratio	1.77	2.00	2.22	2.45	2.70

Dividend Yield	2.6%	2.6%	2.5%	2.5%	2.5%

DuPont analysis

Net profit margin x asset turnover x equity multiplier = ROE. Returns and margins below are decimal ratios.

Metric	2021	2022	2023	2024	2025
Net Profit Margin	0.10	0.10	0.09	0.08	0.08
Asset Turnover	1.14	1.19	1.19	1.19	1.19
Equity Multiplier	1.84	1.81	1.78	1.77	1.75
DuPont ROE	0.21	0.21	0.19	0.18	0.16

Metric	ROE change (pp)
Net Profit Margin	-1.11
Asset Turnover	0.07
Equity Multiplier	-0.10

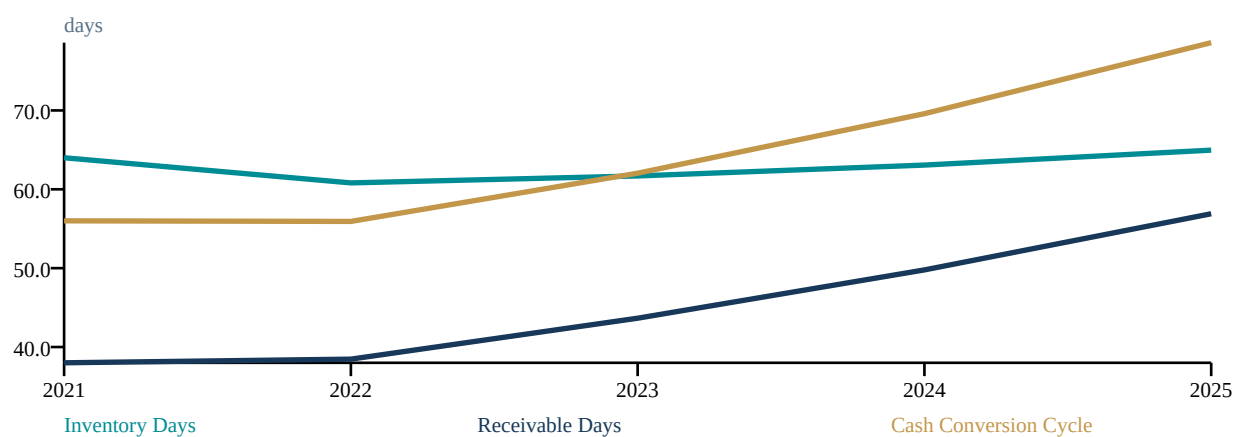

The attribution averages all six factor replacement orders. Contributions sum to the latest ROE change; they are arithmetic, not causal.

Working capital analysis

Metric	2021	2022	2023	2024	2025
Inventory Days	64.00	60.81	61.69	63.07	64.96
Receivable Days	38.00	38.46	43.65	49.78	56.90
Payable Days	46.00	43.35	43.31	43.26	43.27
Cash Conversion Cycle	56.00	55.93	62.04	69.59	78.59
Current Ratio	1.77	2.00	2.22	2.45	2.70

Cash conversion cycle = inventory days + receivable days - payable days. Days use average balances.

Operating cash cycle

Strengths, risks & monitoring

Evidence uses native metric units. Values marked as percentages in the ratio section are decimal ratios here.

Strengths

POSITIVE - Operating cash flow improved

Operating Cash Flow moved in a potentially favorable direction versus the previous year.

Operating Cash Flow: 2023: 149,000,000.00; 2024: 162,000,000.00; 2025: 180,000,000.00

Investigate: Is this improvement recurring and sustainable?

POSITIVE - Consistent revenue growth

Revenue grew in both latest annual intervals.

Revenue: 2023: 1,320,000,000.00; 2024: 1,485,000,000.00; 2025: 1,670,000,000.00

Investigate: Is growth supported by volume, pricing or acquisitions?

Risks

WARNING - Receivable collection slowing

Receivable Days increased by more than five days in the latest year. This may increase operating funding needs.

Receivable Days: 2023: 43.65; 2024: 49.78; 2025: 56.90

Investigate: Did terms or customer quality change? Is inventory moving more slowly?

WARNING - Cash tied up for longer

Cash Conversion Cycle increased by more than five days in the latest year. This may increase operating funding needs.

Cash Conversion Cycle: 2023: 62.04; 2024: 69.59; 2025: 78.59

Investigate: Did terms or customer quality change? Is inventory moving more slowly?

Areas to monitor

WATCH - Margin compression across three years

Net margin declined across the latest three annual observations, suggesting persistent earnings pressure.

Net Profit Margin: 2023: 0.09; 2024: 0.08; 2025: 0.08

Investigate: Are input costs, overhead or financing costs rising?

WATCH - Cash cycle worsening over three years

The cash conversion cycle lengthened in both latest annual movements.

Cash Conversion Cycle: 2023: 62.04; 2024: 69.59; 2025: 78.59

Investigate: What collection and stock targets could release cash?

Scenario analysis

Base case and active scenario are projected operating models, not historical cash flow.

One-year operating model. COGS and cash operating expenses are percentages of projected revenue; operating expenses exclude depreciation. Depreciation stays at the latest reported amount. Interest equals scenario ending debt x interest rate. Tax applies only to positive pretax profit; no tax-loss benefit is assumed. Receivable, inventory and payable days determine projected ending balances using revenue or COGS / 365. Operating working capital = receivables + inventory - payables. OCF proxy = net income + depreciation - change in operating working capital. FCF proxy = OCF proxy - capex. Other accruals, provisions, tax timing and financing cash flows are excluded. ROA and ROE use frozen latest total assets and equity; debt-to-equity uses frozen equity. These are scenario return proxies, not a balanced three-statement forecast. Base case uses zero revenue growth and latest cost ratios, debt and ending-balance days; historical average-balance days differ.

Monetary outputs below are in full currency units; ROA, ROE and Net Margin are decimal ratios.

Metric	Base case	Scenario
Revenue	1,670,000,000.00	1,670,000,000.00
Gross Profit	544,420,000.00	544,420,000.00
EBITDA	260,520,000.00	260,520,000.00
EBIT	218,520,000.00	218,520,000.00
Interest	43,000,000.00	43,000,000.00
Tax	43,880,000.00	43,880,000.00
Net Income	131,640,000.00	131,640,000.00
Net Margin	0.08	0.08
ROA	0.09	0.09
ROE	0.16	0.16
Operating Cash Flow proxy	173,640,000.00	173,640,000.00
Free Cash Flow	43,640,000.00	43,640,000.00
Operating Working Capital	366,832,657.53	366,832,657.53
Cash Conversion Cycle	88.00	88.00
Debt-to-Equity	0.49	0.49
Interest Coverage	5.08	5.08

Scenario assumptions

Rates below use decimals (0.15 = 15%); days are in days; monetary values use full currency units.

Metric	Base	Scenario
revenue_growth	0.00	0.00
cogs_ratio	0.67	0.67
opex_ratio	0.17	0.17
interest_rate	0.10	0.10
tax_rate	0.25	0.25
receivable_days	64.00	64.00
inventory_days	70.00	70.00
payable_days	46.00	46.00
capex	130,000,000.00	130,000,000.00
debt	410,000,000.00	410,000,000.00

One-year operating model. COGS and cash operating expenses are percentages of projected revenue; operating expenses exclude depreciation. Depreciation stays at the latest reported amount. Interest equals scenario ending debt x interest rate. Tax applies only to positive pretax profit; no tax-loss benefit is assumed. Receivable, inventory and payable days determine projected ending balances using revenue or COGS / 365. Operating working capital = receivables + inventory - payables. OCF proxy = net income + depreciation - change in operating working capital. FCF proxy = OCF proxy - capex. Other accruals, provisions, tax timing and financing cash flows are excluded. ROA and ROE use frozen latest total assets and equity; debt-to-equity uses frozen equity. These are scenario return proxies, not a balanced three-statement forecast. Base case uses zero revenue growth and latest cost ratios, debt and ending-balance days; historical average-balance days differ.

Appendix: data sources

Recorded sources for imported or manually entered values.

Metric	Values	First_Year	Last_Year
Fictional demo - Bundled Apex demonstration dataset	200.00	2021	2025

Appendix: data quality & methodology

All available accounting reconciliation checks passed. This is not an audit.

First-year average-balance ratios use ending balances because opening balances are unavailable. Later years use the mean of consecutive opening and closing balances. Revenue proxies credit sales; COGS proxies purchases. Full fiscal years use 365 days.

No source values are altered. N/A denotes missing dependencies or nonpositive denominators. Preferred dividends must be explicitly supplied for EPS; ending shares and weighted-average shares are distinct.

Growth uses positive prior bases; CAGR uses positive endpoints and elapsed years. Health score interpolation and risk thresholds are generic. Accounting conventions, seasonality and industry differences can limit comparisons.

Formula reference

Every conventional ratio requires a positive denominator. Missing dependencies remain N/A.

Current Ratio: $\text{Current assets} / \text{current liabilities}$

Quick Ratio: $(\text{Current assets} - \text{inventory}) / \text{current liabilities}$

Cash Ratio: $\text{Cash} / \text{current liabilities}$

Operating Cash Flow Ratio: $\text{Operating cash flow} / \text{current liabilities}$

Gross Profit Margin: $\text{Gross Profit} / \text{revenue}$

Operating Margin: $\text{EBIT} / \text{revenue}$

EBITDA Margin: $\text{EBITDA} / \text{revenue}$

Net Profit Margin: $\text{Net Income} / \text{revenue}$

ROA: $\text{Net income} / \text{average total assets}$

ROE: $\text{Net income} / \text{average equity}$

ROCE: $\text{EBIT} / (\text{total assets} - \text{current liabilities})$

Asset Turnover: $\text{Revenue} / \text{average total assets}$

Inventory Turnover: $\text{COGS} / \text{average inventory}$

Receivables Turnover: $\text{Revenue} / \text{average accounts receivable}$

Payables Turnover: $\text{COGS} / \text{average accounts payable}$

Inventory Days: $365 \times \text{average inventory} / \text{COGS}$

Receivable Days: $365 \times \text{average accounts receivable} / \text{Revenue}$

Payable Days: $365 \times \text{average accounts payable} / \text{COGS}$

Cash Conversion Cycle: $\text{Inventory days} + \text{receivable days} - \text{payable days}$

Net Working Capital: $\text{Current assets} - \text{current liabilities}$

Total Debt: $\text{Short-term debt} + \text{long-term debt}$

Debt-to-Equity: $\text{Interest-bearing debt} / \text{ending equity}$

Liabilities-to-Equity: $\text{Total liabilities} / \text{ending equity}$

Debt Ratio: $\text{Total liabilities} / \text{total assets}$

Long-Term Debt to Capital: $\text{Long-term debt} / (\text{long-term debt} + \text{equity})$

Interest Coverage: $\text{EBIT} / \text{interest expense}$

Cash Interest Coverage: $(\text{OCF} + \text{cash interest} + \text{cash taxes}) / \text{cash interest}$; assumes OCF includes these payments

Free Cash Flow: $\text{Operating cash flow} - \text{positive capital expenditure}$

Operating Cash Flow Margin: $\text{Operating cash flow} / \text{revenue}$

Cash Flow to Net Income: $\text{Operating cash flow} / \text{positive net income}$

Capex Intensity: $\text{Positive capital expenditure} / \text{revenue}$

EPS: $(\text{Net income} - \text{preferred dividends}) / \text{weighted average shares}$

P/E Ratio: $\text{Market price} / \text{positive EPS}$

Book Value Per Share: $\text{Positive equity} / \text{ending shares}$

Price-to-Book: $\text{Market price} / \text{positive book value per share}$

Dividend Payout Ratio: $\text{Cash dividends} / \text{positive net income}$

Dividend Yield: $(\text{Cash dividends} / \text{ending shares}) / \text{market price}$

Falcon Finalysis is an analytical and educational decision-support tool. Outputs depend on the accuracy and completeness of uploaded financial information. Results are not investment, lending, accounting, audit, tax, or legal advice.
